RJ requires additional Future digital revolution (if yes please tell me more, if not please write no)

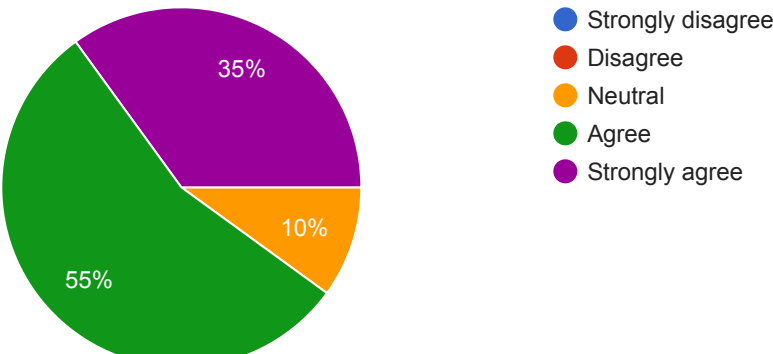

20 responses

- No
- It need some improvements for the digital system
- Some heating problems fixes can make some changes
- I see no improvements in the system to be honest
- It's the perfect time for the RJ to enhance their systems because of the wide future in advanced technology also to keep up with other companies revolution
- I think it requires more improvements to security
- yes, continuous improvement is required in all technical aspects especially in the area of cloud hosting and cyber security.
- Yes I think it requires a lot of improvments
- Some interface changes are really recommended

Digital transformation reduces RJ's use of paper

Errors are decreased in the digital revolution/transformation(tell me more about it what you think)

20 responses

The errors are less and less common and can be controlled more easily

I think errors plays an important part in the revolution of any system the more errors the more improvements

I think the more errors the more improvements to come in the future

Errors are the thing that improve the systems in time changes will come eventually

It's true it was decreased but I think needs more improvements

Problems will be solved automatically in the evaluation

I don't have enough information on the matter with my experience to give a specific answer

Even in these times errors are happening maybe in the future it will be reduced

Errors don't decrease with change the error is the core of change if we can't have problems we don't improve the systems in the long run

There was a substantially decreased in the last 2 years that I've been working there errors are less common these days

True it was decrease substantially

It's true there are less and less errors and data losses that are happening these days thanks to the transformation that happened

With more transformations the errors will decrease in the long run

Based on my calculations errors are getting rare to encounter

Based on some study's that was made last year the number of errors decreases with revolution

Errors still the same in the system or probably the department I work in it still happens

strongly agree

There are more problem in this systems that the old ones

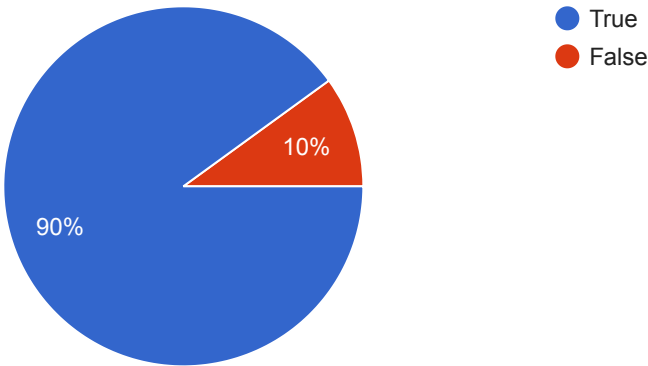

Some flight connection can go down for no reason and that's a disaster if it keeps happening this days it's better more secured

In any transformation errors are going to happen but these days are starting to be less and less common

Do you think Digital revolution will results in a decrease in the number of employees

Comment please if you have any thoughts

3 responses

I only have one comment on this manner that we need more time to see the effects of this revolution only then we can get a clear answers about the positive or the negative side of things on it

I have no comment on the matter

The digital revolution is the best thing that the RJ did
